

Product Environmental Report

14-inch MacBook Pro

Date introduced
January 17, 2023

Made with better materials

100%

recycled aluminum enclosure

100%

recycled rare earth elements in all magnets

Tackling climate change

10%

Over 10 percent decrease in carbon footprint compared with previous generation

Energy efficient

66%

less energy consumed than the ENERGY STAR® energy efficiency requirement

Smarter chemistry¹

- Arsenic-free display glass
- Mercury-free
- Brominated flame retardant-free
- PVC-free
- Beryllium-free

Responsible packaging

100%

of the wood fiber comes from recycled and responsible sources

97%

of the packaging is fiber-based, due to our work to eliminate plastic in packaging

Apple Trade In

Return your device through Apple Trade In, and we'll give it a new life or recycle it for free.

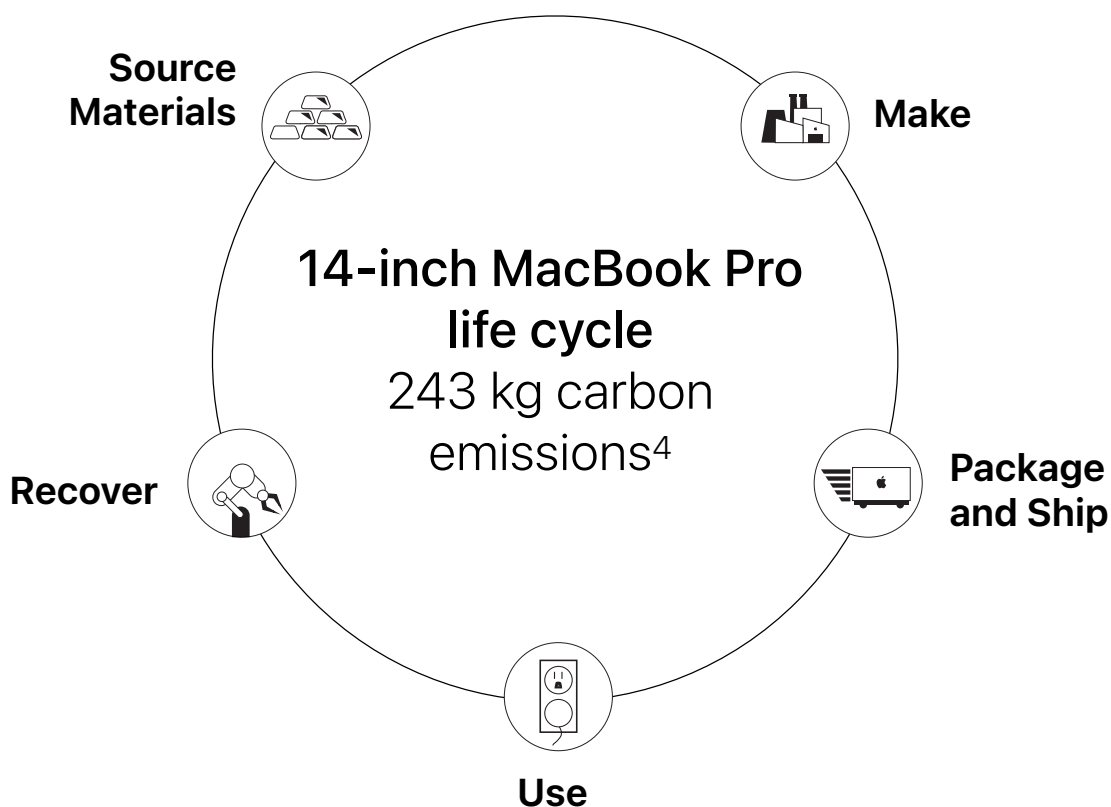

One-third of 14-inch MacBook Pro is made from recycled materials²

Taking responsibility for our products at every stage

We take responsibility for our products throughout their life cycles—including the materials they are made of, the people who assemble them, and how they are recycled at end of life. And we focus on the areas where we can make the biggest difference for our planet: reducing our impact on climate change, conserving important resources, and using safer materials.

We sell millions of products. So making even small adjustments can have a meaningful impact.

Carbon footprint

We continue to make progress in addressing Apple’s contribution to climate change—by focusing on making energy-efficient products with renewable or recycled materials and with renewable energy. We’ve reduced the 14-inch MacBook Pro carbon footprint by over 10 percent compared with the previous generation, due to improved energy efficiency from Apple’s chip technology, a logistics plan that reduces emissions from shipping by over 95 percent, and an increase in suppliers’ use of renewable electricity.⁵ Apple is committed to making carbon neutral products by 2030.

14-inch MacBook Pro life cycle carbon emissions⁶

79%	Production
<1%	Transport
20%	Use
<1%	End-of-life processing

Source Materials

14-inch MacBook Pro now contains 100% recycled gold in the plating of multiple printed circuit boards—a first for any Mac.

To conserve important resources, we work to reduce the material we use and aim to one day source only recycled or renewable materials in our products. And as we make this transition, we remain committed to the responsible sourcing of primary materials. We map many materials, some to the mineral source, and establish the strictest standards for smelters and refiners. Apple also requires 100 percent of identified tin, tantalum, tungsten, gold, cobalt, and lithium smelters and refiners to participate in third-party audits.⁷ We're proud to be recognized as a worldwide leader in the responsible sourcing of minerals in our products. Our product designs also consider the safety of those who make, use, and recycle our products, restricting the use of hundreds of harmful substances. Our standards go beyond what's required by law to protect people and the environment.

Aluminum

Apple created an aluminum alloy made of 100 percent recycled aluminum, which we use for the enclosure of 14-inch MacBook Pro. This alloy delivers the same strength, durability, and flawless finish—without mining any new bauxite (aluminum ore) from the earth.

Rare earth elements

All magnets contain 100 percent recycled rare earth elements, representing 99 percent of the total rare earth elements in the device.

Tin

The solder of multiple printed circuit boards contains 100 percent recycled tin.

Plastic

We're transitioning from fossil fuel-based plastics to those made from renewable or recycled sources. For 14-inch MacBook Pro, we use 5 percent or more recycled plastic in seven components.

Gold

Apple is pioneering industry-leading levels of traceability in recycled materials to build a gold supply chain of exclusively recycled content. We're now using 100 percent recycled gold in the plating of multiple printed circuit boards.

Smarter chemistry

14-inch MacBook Pro is free of harmful substances like beryllium, brominated flame retardants, PVC, phthalates, arsenic in the display glass, and mercury.¹ And 100 percent of the materials in the 14-inch MacBook Pro are covered by our [Regulated Substances Specification](#). We go beyond what's required by aiming to understand the non-regulated substances in every part of every product—an effort that requires an industry-leading level of transparency through the entire supply chain. We consistently identify the makeup of over 75 percent by mass of Mac devices.

Make

The Apple Supplier Code of Conduct sets strict standards for the protection of people in our supply chain and the planet that we all share. Every year, we assess our suppliers' performance in upholding the standards required by our Code.

We work closely with our suppliers to provide safe and healthy workplaces where people are treated with dignity and respect, and to reduce suppliers' environmental impact. Our requirements apply across our supply chain and include the responsible sourcing of materials. From the strong foundation set by our Code, we go further—from helping suppliers transition to renewable energy, to providing educational opportunities for their employees, to supporting final assembly suppliers in reducing waste.

Greener chemicals

All established 14-inch MacBook Pro final assembly supplier sites use safer cleaners and degreasers in their manufacturing processes, as determined by methodologies like the GreenScreen® assessment.⁸

Zero Waste to Landfill

No established 14-inch MacBook Pro final assembly supplier sites generate any waste sent to landfill.⁹

Supplier energy use

All 14-inch MacBook Pro final assembly supplier sites are transitioning to 100 percent renewable energy for Apple production.

Package and Ship

14-inch MacBook Pro packaging is made with 100 percent recycled or responsibly sourced wood fiber and does not use outer plastic wrap.¹⁰ This brings us one step closer to our goal of completely removing plastic from all our packaging by 2025.

To improve our packaging, we are working to eliminate plastics, increase recycled content, and use less packaging overall. All of the wood fiber in our packaging is either recycled or comes from responsibly managed forests.¹¹ And we have protected or created enough responsibly managed forests to cover all the virgin wood fiber we use in our packaging.¹² This ensures working forests are able to regrow and continue to clean our air and purify our water.

97%

of the packaging¹³ is fiber-based, due to our work to eliminate plastic in packaging

43%

recycled content in fiber packaging

100%

of the virgin wood fiber in the packaging comes from responsibly managed forests¹¹

Use

14-inch MacBook Pro uses 66 percent less energy than the requirement for ENERGY STAR.¹⁴

We design our products to be energy efficient, long-lasting, and safe. 14-inch MacBook Pro uses software and power-efficient components that intelligently manage power consumption. We also run our own Reliability and Environmental Testing Labs, where our products go through rigorous testing before they leave our doors. Our support continues throughout each product's life cycle, with regular software updates to keep devices current and a network of authorized repair professionals to service them, if necessary.

Energy consumption of ENERGY STAR-rated products

Apple devices consistently rank among the high-performing products rated by ENERGY STAR, which sets specifications that typically reflect the 25 percent most energy-efficient devices on the market. 14-inch MacBook Pro consumes 66 percent less energy than the requirement for ENERGY STAR.¹⁴

Designed to last

To ensure durability, we assessed 14-inch MacBook Pro in our Reliability Testing Lab, using rigorous testing methods that simulate customers' experiences.

Made with smarter chemistry

We apply rigorous controls for materials users touch—all based on recommendations from toxicologists and dermatologists.

Recover

Return your product with Apple Trade In, and we'll ensure it has a long life or recycle it for free.

When products are used longer, fewer resources are extracted from the earth. That's why we launched Apple Trade In—it offers customers a seamless way to return their old devices and accessories to Apple. Eligible devices can be traded in for credit or an Apple Store Gift Card, while accessories and other devices can be recycled for free.¹⁵ We also offer and participate in [product take-back and recycling collection programs](#) for 99 percent of the countries where we sell products—and we hold our recyclers to high standards. Our efforts to keep harmful substances out of our products also mean our materials are safer to recover and reuse.

Apple Trade In

apple.com/trade-in

Definitions

Bio-based plastics: Bio-based plastics are made from biological sources rather than from fossil-fuel sources. Bio-based plastics allow us to reduce reliance on fossil fuels.

Carbon footprint: Estimated emissions are calculated in accordance with guidelines and requirements as specified by ISO 14040 and ISO 14044. There is inherent uncertainty in modeling carbon emissions due primarily to data limitations. For the top component contributors to Apple's carbon emissions, Apple addresses this uncertainty by developing detailed process-based environmental models with Apple-specific parameters. For the remaining elements of Apple's carbon footprint, we rely on industry average data and assumptions. Calculation includes emissions for the following life cycle phases contributing to Global Warming Potential (GWP 100 years) in CO₂ equivalency factors (CO₂e):

- **Production:** Includes the extraction, production, and transportation of raw materials, as well as the manufacture, transport, and assembly of all parts and product packaging.
- **Transport:** Includes air and sea transportation of the finished product and its associated packaging from manufacturing site to regional distribution hubs. Transport of products from distribution hubs to end customers is modeled using average distances based on regional geography.
- **Use:** Apple assumes a three- or four-year period for power use by first owners based on the product type. Product use scenarios are based on historical customer use data for similar products. Energy use is simulated in various ways; for example, by modeling

daily battery drain or through performing activities like movie and music playback. Geographic differences in the power grid mix have been accounted for at a regional level.

- **End-of-life processing:** Includes transportation from collection hubs to recycling centers and the energy used in mechanical separation and shredding of parts. For more information on the carbon footprint, visit apple.com/environment/answers

Recycled materials: Recycling makes better use of finite resources by sourcing from recovered rather than mined materials. Recycled content claims for materials used in our products have been verified by an independent third party to a recycled content standard that conforms to ISO 14021.

Renewable materials: We define bio-materials as those that can be regenerated in a human lifespan, like paper fibers or sugarcane. Bio-materials can help us use fewer finite resources. But even though bio-materials have the ability to regrow, they are not always managed responsibly. Renewable materials are a type of bio-material managed in a way that enables continuous production without depleting the earth's resources. That's why we focus on sources that are certified for their management practices.

Supplier Clean Energy Program: Since the electricity used to make our products is the largest contributor to our overall carbon footprint, we're helping our suppliers become more energy efficient and transition to new renewable energy sources. We're committed to transitioning our entire manufacturing supply chain to 100 percent renewable electricity by 2030.

Endnotes

¹ Apple's Regulated Substances Specification describes Apple's restrictions on the use of certain chemical substances in materials in Apple products, accessories, manufacturing processes, and packaging used for shipping products to Apple's end-customers. Restrictions are derived from international laws or directives, regulatory agencies, eco-label requirements, environmental standards, and Apple policies. Every Apple product is free of PVC and phthalates except for AC power cords in India, Thailand (for 2-prong AC power cords), and South Korea, where we continue to seek government approval for our PVC and phthalates replacement. Apple products comply with the European Union Directive 2011/65/EU and its amendments, including exemptions for the use of lead such as high-temperature solder. Apple is working to phase out the use of these exempted substances for new products where technically possible.

² Product recycled content is the mass of certified recycled material relative to the overall mass of the device, not including packaging or in-box accessories.

³ 14-inch MacBook Pro achieved a Gold rating in the United States and Canada, in accordance with IEEE 1680.1 or UL 110, and is listed as such on the Electronic Product Environmental Assessment Tool (EPEAT) Registry. EPEAT registers computers, displays, and mobile phones based on environmental requirements in these standards. For more information, visit www.epeat.net.

⁴ Greenhouse gas emissions were calculated using a life cycle assessment methodology in accordance with ISO 14040 and 14044 standards and based on 14-inch MacBook Pro standard configuration with 64GB storage. We often update our carbon models to leverage new information. As a result, our estimate for the carbon footprint of the previous generation—MacBook Pro (14-inch, 2021) with 512GB storage configuration—increased from 271 kg CO₂e (as published in its Product Environmental Report) to 280 kg CO₂e (as used in this report for comparison purposes).

Endnotes

Carbon footprint			
14-inch MacBook Pro (2023)		14-inch MacBook Pro (2021)	
Apple M2 Pro with 10-core CPU and 16-core GPU, with 512GB storage	243 kg CO ₂ e	Apple M1 Pro with 8-core CPU and 14-core GPU, with 512GB storage	280 kg CO ₂ e
Apple M2 Pro with 12-core CPU and 19-core GPU, with 1TB storage	272 kg CO ₂ e	Apple M1 Pro with 10-core CPU and 16-core GPU, with 1TB storage	312 kg CO ₂ e
Apple M2 Max with 12-core CPU and 30-core GPU, with 1TB storage	301 kg CO ₂ e		-

⁵ MacBook Pro (14-inch, 2021) was used for comparison as the most recently released and similar device. Preproduction 14-inch MacBook Pro standard configuration with 512GB storage was compared to shipping MacBook Pro (14-inch, 2021) standard configuration with 512GB storage configuration since these are the two lowest storage configurations offered.

⁶ Percentages may not total 100 due to rounding.

⁷ We map materials in our supply chain and publish a list of identified tin, tantalum, tungsten, and gold (3TG), cobalt, and lithium smelters and refiners in our supply chain. Third-party assessments seek to confirm sourcing practices and are part of our responsible sourcing program. In addition, our efforts consider a broad range of risks, including social, environmental, human rights, and governance risks.

⁸ Chemicals that meet GreenScreen® benchmark 3 or 4 or other equivalent methodologies like U.S. EPA Safer Choice are considered safer and preferred for use. GreenScreen® is a comprehensive assessment tool that evaluates substances against 18 different criteria. For more information, visit www.greenscreenchemicals.org.

⁹ All established final assembly supplier sites—or those that have been Apple suppliers for more than one year—for 14-inch MacBook Pro are third-party verified as Zero Waste by UL LLC (UL 2799 Standard). UL requires at least 90 percent diversion through methods other than waste to energy to achieve Zero Waste to Landfill (Silver 90–94 percent, Gold 95–99 percent, and Platinum 100 percent) designations.

¹⁰ Based on retail packaging as sold by Apple.

¹¹ Responsible sourcing of wood fiber is defined in Apple's [Sustainable Fiber Specification](#). We consider wood fibers to include bamboo.

¹² For more information about our work to protect and create responsibly managed forests, please read our [Environmental Progress Report](#).

¹³ Breakdown of U.S. retail packaging by weight. Adhesives, inks, and coatings are excluded from our calculations of plastic content and packaging weight.

¹⁴ Energy consumption and energy efficiency values are based on the ENERGY STAR Program Requirements for Computers, including the max energy allowance for 14-inch MacBook Pro. For more information, visit www.energystar.gov. ENERGY STAR and the ENERGY STAR mark are registered trademarks owned by the U.S. Environmental Protection Agency. The 14-inch MacBook Pro is tested with a fully charged battery and powered by the 67W USB-C Power Adapter with the USB-C to MagSafe 3 Cable (2m).

- Off: Lowest power mode of the system. System is shut down.
- Sleep: Low power state that is entered automatically after 10 minutes of inactivity (default), or by selecting Sleep from the Apple menu. Wake for network access enabled.
- Idle—Display on: System is on and has completed loading macOS. Display brightness was set as defined by ENERGY STAR Program Requirements for Computers and Auto-Brightness was turned off. Connected to Wi-Fi.
- Power adapter, no-load: Condition in which the 67W USB-C Power Adapter with the USB-C to MagSafe 3 Cable (2m) is connected to AC power, but not connected to the system.
- Power adapter efficiency: Average of the 67W USB-C Power Adapter with the USB-C to MagSafe 3 Cable (2m) measured efficiency when tested at 100 percent, 75 percent, 50 percent, and 25 percent of the power adapter's rated output current.

Endnotes

Mode	Power consumption for 14-inch MacBook Pro		
	100V	115V	230V
Off	0.11W	0.11W	0.13W
Sleep	0.23W	0.24W	0.26W
Idle—Display on	4.21W	4.15W	4.24W
Power adapter, no-load	0.04W	0.04W	0.05W
Power adapter efficiency	89.5%	89.9%	89.4%

¹⁵ Trade-in values vary based on the condition, year, and configuration of your trade-in device, and may also vary between online and in-store trade-in. You must be at least 18 years old. In-store trade-in requires presentation of a valid, government-issued photo ID (local law may require saving this information). Additional terms from Apple or Apple's trade-in partners may apply.
