**100% recycled gold in the wire of all cameras
and in the plating of multiple printed circuit boards**

Taking responsibility for our products at every stage

We take responsibility for our products throughout their lifecycle—including the materials we use, the way we make them, how we package and ship them, and how we focus on reducing our impact on the environment throughout their life.

We sell millions of products. So making even small adjustments can have a meaningful impact.

Carbon footprint

We continue to work on reducing our carbon footprint by focusing on making our products more efficient, using materials that are more sustainable, and using renewable energy. We are also working to reduce our carbon footprint by using more sustainable packaging and shipping methods. We are committed to our goal of reducing our carbon footprint by 25% by 2025.

iPhone 14 Pro life cycle carbon emissions

- 81% Production
- 3% Distribution
- 1% Use
- 1% End-of-life recycling

Source Materials

The world of consumer electronics is made with 14 rare earth elements.

Our company is one of the world's leading manufacturers of consumer electronics. We are committed to the responsible sourcing of materials. We manage our operations in a way that ensures the highest standards of environmental performance. We are committed to the highest standards of environmental performance. We are committed to the highest standards of environmental performance.

Rare earth elements

We use 14 rare earth elements in our manufacturing process. These elements are essential for the production of many of our products.

Tungsten

We use tungsten in our manufacturing process. It is a hard and heavy metal that is used in many applications.

Tin

We use tin in our manufacturing process. It is a soft, malleable metal that is used in many applications.

Plastic

We use plastic in our manufacturing process. It is a synthetic material that is used in many applications.

Gold

We use gold in our manufacturing process. It is a precious metal that is used in many applications.

Smarter chemistry

In 2014, we introduced a new manufacturing process that uses 14 rare earth elements. This process is more efficient and produces less waste. We are committed to the highest standards of environmental performance.

Make

Apple's Supplier Code of Conduct is designed to ensure the production of our products in a way that respects the environment and the well-being of our suppliers' workforce and the communities in which they operate.

Working with our suppliers to identify and work to reduce the environmental impact of our products is a key part of our commitment to our customers. Our suppliers are responsible for the environmental impact of their operations, and we work with them to identify areas for improvement. We encourage our suppliers to adopt best practices for environmental management and to work with us to reduce their environmental footprint.

Greener chemicals

Apple is committed to reducing the environmental impact of the chemicals used in our products. We are working with our suppliers to identify and use greener chemicals that are safer for the environment and our workers. We are also working to reduce the amount of chemicals used in our products.

Zero Waste to Landfill

Apple is committed to achieving zero waste to landfill for our products. We are working with our suppliers to identify and use materials that can be recycled or reused. We are also working to reduce the amount of waste generated in our products.

Supplier energy use

Apple is committed to reducing the environmental impact of our products. We are working with our suppliers to identify and use renewable energy sources. We are also working to reduce the amount of energy used in our products.

Package and Ship

iPhone 14 Pro packaging does not use any plastic wrap. The iPhone 14 Pro is packaged in a cardboard box of composite material made from 100% recycled paper.

Apple's iPhone 14 Pro packaging was designed to minimize the use of cardboard and use 100% recycled cardboard. The iPhone 14 Pro packaging is made from 100% recycled composite material made from 100% recycled paper. The iPhone 14 Pro packaging is made from 100% recycled composite material made from 100% recycled paper.

95%

of iPhone 14 Pro packaging¹² is fiber-based and does not use any plastic in iPhone 14 Pro packaging.

74%

of cardboard in iPhone 14 Pro packaging.

100%

of virgin wood fiber in iPhone 14 Pro packaging comes from managed forests.¹

Use

iPhone 14 Pro uses a new design that requires less energy to produce and use.¹³

With its new design, iPhone 14 Pro uses less energy to produce and use. It also uses less energy to transport and use. This means that iPhone 14 Pro is more energy efficient than previous models. The U.S. Department of Energy's Energy Star program has recognized iPhone 14 Pro as a leader in energy efficiency. This is a testament to Apple's commitment to reducing its carbon footprint and creating products that are better for the planet.

Energy efficiency

As of October 2022, iPhone 14 Pro is the most energy-efficient smartphone in the world, according to the U.S. Department of Energy's Energy Star program. This is a testament to Apple's commitment to reducing its carbon footprint and creating products that are better for the planet.

U.S. Department of Energy standard

Designed to last

iPhone 14 Pro is designed to last. It features a new design that is more durable than previous models. This means that iPhone 14 Pro is built to last, so you can use it for years to come.

Made with smarter chemistry

With its new design, iPhone 14 Pro uses less energy to produce and use. This is a testament to Apple's commitment to reducing its carbon footprint and creating products that are better for the planet.

Recover

Run our product recovery and innovation program to help you recover your products.

We're committed to helping you recover your products. We've created a program that helps you recover your products. We've created a program that helps you recover your products. We've created a program that helps you recover your products.

iPhone recycling

We're committed to helping you recover your products. We've created a program that helps you recover your products. We've created a program that helps you recover your products.

Definitions

Bio-based plastics: Bio-based plastics are plastics derived from biological sources, such as corn, sugarcane, or wood. They are often used as alternatives to petroleum-based plastics.

Carbon footprint: Carbon footprint is the total amount of greenhouse gases (including carbon dioxide, methane, and nitrous oxide) that are produced by individuals, organizations, or products. It is measured in terms of carbon dioxide equivalents (CO₂e).

Production: Production is the process of manufacturing goods or services. It involves the transformation of raw materials into finished products through various processes, including extraction, processing, and assembly.

Transport: Transport is the movement of goods or services from one location to another. It can be done through various modes of transport, including road, rail, air, and sea.

Use: Use is the consumption of goods or services by individuals or organizations. It involves the utilization of resources to create value and meet needs.

End-of-life processing is the process of managing the disposal of products at the end of their useful life. It can involve recycling, incineration, or landfilling.

End-of-life processing: End-of-life processing is the process of managing the disposal of products at the end of their useful life. It can involve recycling, incineration, or landfilling.

Recycled materials: Recycled materials are materials that have been processed from waste and are used to create new products. They help reduce the need for virgin materials and reduce environmental impact.

Renewable materials: Renewable materials are materials that are derived from natural resources that can be replenished over time. Examples include wood, cotton, and bamboo.

Supplier Clean Energy Program: The Supplier Clean Energy Program is a commitment to source clean energy for our operations. We are working with our suppliers to ensure that the energy used in the production of our products is sourced from renewable sources.
