Editorial: Align with Web IDL specification #999

Merged
jan-ivar merged 1 commit into w3c:main from autokagami:mediacapture-streams on May 2

Conversation 0 Commits 1 Checks 0

autokagami commented on Apr 27 • edited by pr-preview (bot)

This is an automated pull request to align the latest Web IDL specification.

The followings are the Web IDL validation messages that may help understanding this PR:

- Validation error at line 3 in mediacapture-streams.webidl: Dictionary argument must be optional if no required fields

Error: Dictionary argument must be optional if no required fields

Currently this autofix might introduce awkward code formatting, and feel free to manually fix it when it happens.

Please file an issue at <https://github.com/saschanUpdater/issues/new> if you think this is invalid or should be enhanced.

[css-backgrounds-4] Fix definition of <position-three> #1000

Merged
svgeesus merged 1 commit into w3c:main from tidoust:css-backgrounds-4-position-three

tidoust commented 2 days ago

Enclosing `<>` needed to be doubled. Also `<dfn>` to make the term linkable.

[css-spec-shortname-1] Brief description will include the #issuenum-or-URL and/or link to the issue in minutes.

Copy the above line into the Title and replace with relevant details. Fill in any additional details in the github.com/w3c/csswg-drafts/blob/master/CONTRIBUTING.md for more info.

[css-backgrounds-4] Fix definition of <position-three>

Missing tasks in parallel steps of Media Capture and Streams #1000

Open 2 tasks

dontcallmedom-bot opened this issue last week · 0 comments

dontcallmedom-bot commented last week

While crawling [Media Capture and Streams](#), the following algorithms fire an event, or resolve or reject a Promise in a step that runs [in parallel](#) without first queuing a task.

- The [MediaDevices/enumerateDevices\(\)](#) algorithm resolves/rejects a promise directly in a step that runs [in parallel](#).
- The [MediaDevices/getUserMedia\(\)](#) algorithm resolves/rejects a promise directly in a step that runs [in parallel](#).

See [Dealing with the event loop](#) in the HTML specification for guidance on how to deal with algorithm sections that run [in parallel](#).

While crawling [HTML Standard](#), the following links to other specifications were detected as pointing to non-existing anchors, which should be fixed:

- <https://dom.spec.whatwg.org/#dom-element-setAttribute>
- <https://dom.spec.whatwg.org/#dom-shadowroot-slot-assignment>
- <https://dom.spec.whatwg.org/#concept-event-target>
- <https://drafts.csswg.org/css-align/#propdef-propdef-justify-content>
- <https://drafts.csswg.org/css-align/#propdef-propdef-justify-items>
- <https://drafts.csswg.org/css-grid/#propdef-grid-column-gap>
- <https://drafts.csswg.org/css-grid/#propdef-grid-row-gap>
- <https://drafts.csswg.org/css-multicol/#propdef-column-gap>
- <https://drafts.csswg.org/css-syntax/#conform-classes>
- <https://drafts.csswg.org/css-values/#vw>

Role of W3C: act as
a **centripetal** force

Thank you!
